topHtml	Html to be added just after the <html> tag of the web page. May you are creating php pages and need a declaration here.</html>
headTag	Html to be added just after the <head> tag of the web page. This can be script, such as Google tags, etc.</head>
directoryMode	True or False. The directory mode determines the url structure of your website. If directory mode is True then Webster creates a directory ourUrl (the slug) in folderPath (where we are writing our files) and puts the web page there as an index page.
	Example: https://yoursite.com/how-to-dance/
	If directoryMode is not true the Webster combines ourUrl with fileExtension to save the page and create a url.
	Example: https://yoursite.com/how-to-dance.html
useLinkBox	True or False. Adds a "Link to this page" block at the botton of the content.
frontPage	True or False. Is this the front page of the website?
